

MAD-2 Project Report

1. Student Details

Name: Harsha

Roll No: 23f2005056

2. Project Details

2.1 Project Title

Influencer Engagement & Sponsorship Coordination Platform - V2

2.2 Problem Statement

The project aims to create a platform that bridges the gap between influencers and sponsors, enabling effective collaboration on advertising campaigns. The platform is designed to help sponsors find the right influencers to represent their brand and for influencers to leverage their social media presence to generate revenue.

2.3 Approach to the Problem Statement

To address the problem, I implemented the following structured approach:

1. **Requirement Analysis:** Read the entire project statement thrice and at periodic intervals.
2. **System Design:** Designed the system architecture, including:
 - Database schema.
 - User interfaces tailored to specific roles.
 - RESTful API endpoints..
3. **Implementation:** Built the application using Flask as the web framework, SQLite for database management, and implemented RESTful APIs to connect the backend with the Vue.js-based frontend.

Frameworks and Libraries Used

Backend Framework:

- Flask
- SQLite
- Redis
- Celery
- Jwt

Frontend Framework:

- Vue.js (CLI)
- Bootstrap
-

3.FUNCTIONS:

- SPONSOR:
 - Can create a campaign
 - Can edit that campaign
 - Can find influencers for that campaign
 - Can verify proofs sent by the influencer
- Influencer
 - Can view the campaigns
 - Can search for it
 - Can accept the campaign
 - After accepting it if he completes it. Then he can send it to sponsor, he needs to give a proof
 - If the sponsor accepts it, it will come under completed campaigns
- Sponsor
 - Delete user
 - Delete campaign
 - Flag users
